

23rd April 2014

Dear PIs,

Please be reminded that photography and video recording (imaging) in animal facilities are prohibited. Researchers who need to record images of live or dead animals for any purpose must obtain prior IACUC approval.

Previously, a separate protocol form “Application to Use Animals For Other Scientific Purposes” was required for imaging.

From now on, PIs submitting new applications need not submit a separate application for imaging. Existing protocols may also be amended to add imaging procedure without the need for a separate application for imaging.

Please follow the link for details on [how to add imaging procedure to a protocol](#)
